VanityXL: Custom Wallet Generation for Solana and Ethereum

A Secure, Personalized Solution for Individuals and Project Developers

Have you ever seen a unique blockchain wallet address and thought, *How did they do that? How did they get a custom address?* Now, with **VanityXL**, you can create a personalized wallet that reflects your style or brand identity. Our service specializes in generating vanity wallet addresses on the Solana (SOL) and Ethereum (ETH) networks, giving you the power to stand out in the crypto space. Whether you're an individual or a project developer, VanityXL delivers secure, tailored solutions that prioritize privacy, security, and seamless integration.

How VanityXL Works

Security First

At VanityXL, your security is our top priority. When generating a custom wallet, your private key will never be viewed by our team or any third party. It will be delivered in a secure **.json file**, which will only be accessible to you. Once downloaded, the private key will be deleted from our servers permanently.

For Ethereum wallets, the .json file will be encrypted with a password that is texted directly to your Telegram username along with the file. Although the .zip file containing the .json file will not be password-protected, the Ethereum .json file itself is safeguarded with encryption for additional security.

Note: This service does not generate seed phrases for Ethereum wallets, only private keys. While Ethereum wallets inherently support seed phrases, VanityXL focuses solely on private key delivery for Ethereum wallets.

Custom Address Generation

VanityXL offers personalized wallet generation with specific characters at the start or end of your address. Depending on the blockchain, there are certain restrictions:

- **Solana:** Addresses cannot include the number "0," uppercase letter "O," uppercase letter "I," or lowercase letter "l."
- **Ethereum:** Addresses can only include characters **A-F** and numbers **0-9**.

Custom wallet searches run for a default period of **21 days**. If the requested address is not found within this timeframe, the search can be extended for additional fees. However, no search is guaranteed, as availability depends on the parameters specified.

Pricing Structure

Solana (SOL)

- **3-character search:** 0.75 SOL
- **4-character search:** 1.5 SOL
- **5-character search:** 2.5 SOL
- **6-character search:** 5 SOL
- Add **1.5 SOL** for custom characters at **both the start and end** of the address.

Ethereum (ETH)

- **3-character search:** 0.06 ETH
- **4-character search:** 0.11 ETH
- **5-character search:** 0.205 ETH
- **6-character search:** 0.36 ETH
- Add **.1 ETH** for custom characters at **both the start and end** of the address.

Additional Notes

- **Solana:** Payment is required before the search begins, as search times cannot be estimated beforehand.
- **Ethereum:** An initial quick search determines feasibility. Payment is due after confirmation of search parameters. Additional fees apply to extend searches beyond the default 21-day period.

How to Use Your VanityXL Wallet

Solana (Phantom Wallet)

Importing the Private Key:

1. Open Phantom and navigate to **Add / Connect Wallet**.
2. Select **Import Private Key**, paste the key, and select your desired network and wallet name.
3. Click **Import** to complete.

Exporting the Alphanumeric Private Key:

1. Go to your wallet settings, click the pencil icon next to the wallet, and select **Show Private Key**.
2. Agree to Phantom's terms, then copy and store your key securely.

Ethereum (MetaMask)

Importing the .json File:

1. On the MetaMask browser extension, select **Import Wallet**.
2. Under **Select Type**, choose **JSON File**.
3. Click **Choose File**, locate the file on your desktop, and enter the provided password.
4. Complete the process by clicking **Import**.

Exporting the Private Key for Mobile Use:

1. After importing the .json file into the browser extension, export your private key via MetaMask's settings.
2. This key can then be imported into the MetaMask mobile app for on-the-go access.

Tiered Vanity Wallet Marketplace

VanityXL also offers pre-generated, tiered vanity addresses for Solana and Ethereum. These are categorized as:

- **Elite Wallets:** Typically 5-6 characters at the start or end of the address.
- **Ultra-Elite Wallets:** Highly rare, featuring premium patterns or sequences.

These addresses are **non-refundable** and are available on a **first-come, first-served basis**. Pricing depends on demand and market appeal.

Search Extension and Refund Policy

If a custom address is not found within 21 days:

- **Solana:** Extend to 30 days for an additional **2 SOL** or to 45 days for **3 SOL**.
- **Ethereum:** Extend to 30 days for an additional **0.15 ETH** or to 45 days for **0.2 ETH**.

Refund Policy

- Up to **50% of the initial payment** is refundable if no address is found within 21-30 days.
 - Fees for extending searches are **non-refundable**.
